Ürün Tanımı

BÖHLER W320 ISODISC is a 3% chromium steel and corresponds to material number 1.2365 (32CrMoV12-28). This tool steel has good hot toughness as well as a very high hot hardness and resistance against heat-checkings. Compared to an X37CrMoV5-1 (material number 1.2343), the steel has an increased molybdenum content, which significantly increases its thermal resistance and thus makes it the ideal material in die closed- and open-doe forging. Due to the lower chromium content, reduced through-hardenability occurs which limits its applications to rather smaller tools.

Erime rotası

Airmelted

Özellikler

- Tokluk ve Süneklik : iyi
- Aşınma Direnci : yüksek
- İşlenebilirlik : çok yüksek
- Sıcak Sertlik (kırmızı sertlik) : yüksek
- Cilalanabilirlik : iyi
- Mikro temizlik : iyi
- Termal iletkenlik : çok yüksek

Uygulamalar

- Ekstrüzyon
- Yüksek Basınçlı Döküm
- Dövme (Sıcak / Yarı Sıcak)
- Progressive Forging (Hatebur)
- Yerçekimi / Düşük Basınçlı Döküm

Teslimat durumu

Annealed

Sertlik (HB)	maks. 229

Isıl işlem

Annealing

Sıcaklık	750 kadar 800 °C	Holding time 6 to 8 hours. Slow, controlled furnace cooling at 10 to 20°C/h (50 to 68 °F/hr) to approx. 600°C (1112°F), further cooling in air.

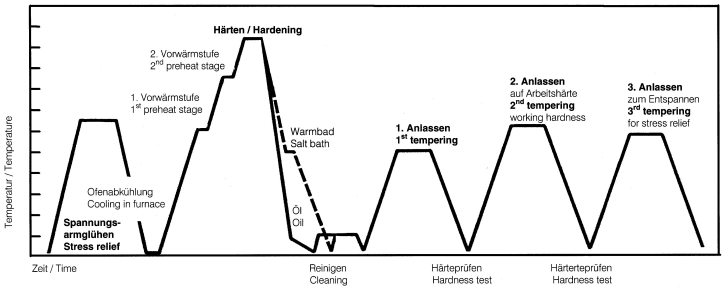
Stress relieving

Sıcaklık	600 kadar 670 °C	For stress relief after extensive machining or for complicated tools. Holding time depending on tool size after complete heating 2 - 6 hours in neutral atmosphere. Slow furnace cooling.

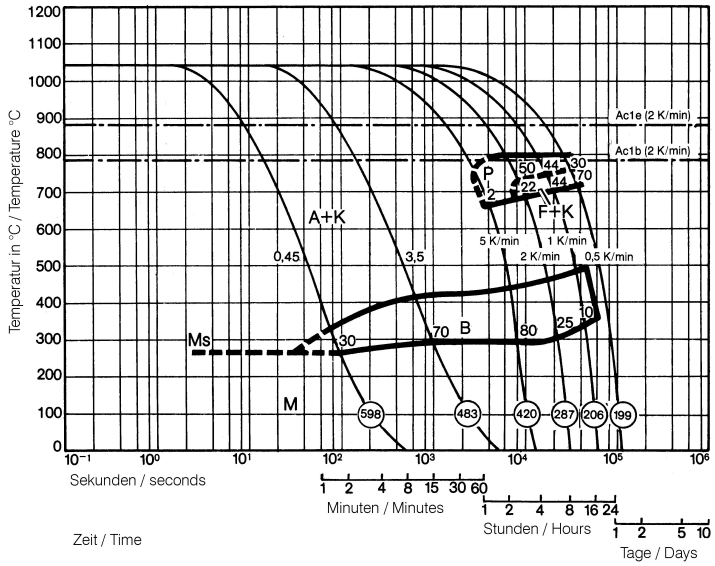
Sertleştirme ve Temperleme

Sıcaklık	1.010 kadar 1.050 °C	Holding time after temperature equalization: 15 to 30 minutes; Quenching: Oil, salt bath (500 - 550°C [932-1022°F]), air, vacuum; After hardening, tempering to the desired working hardness (see tempering chart).

Heat treatment sequence



Continuous cooling CCT curves



Austenitising temperature: 1886°F (1030°C)
Holding time: 15 minutes

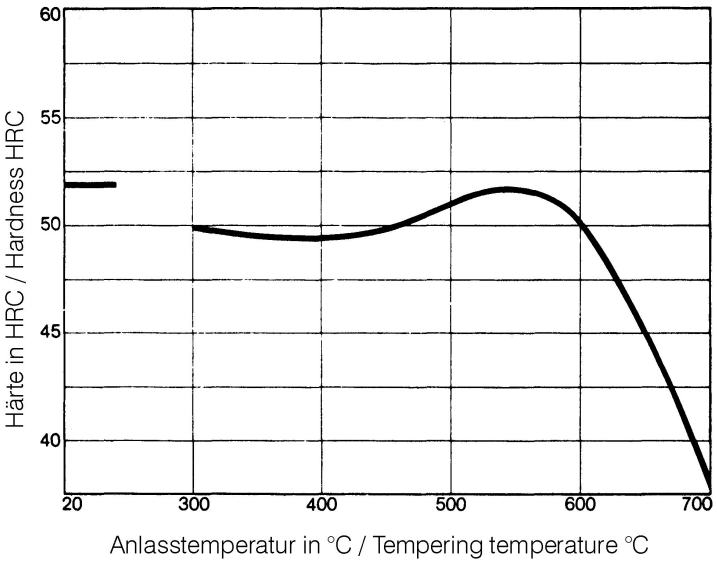
Tempering chart



Tempering:

Slow heating to tempering temperature immediately after hardening / time in furnace 1 hour for each 0,787 inch (20 mm) of work piece thickness but at least 2 hours / cooling in air. It is recommended to temper at least twice. A third tempering cycle for the purpose of stress relieving may be advantageous.

1st tempering approx. 30°C (86°F) above maximum secondary hardness.

2nd tempering to desired working hardness.

The tempering chart shows average tempered hardness values.

3rd for stress relieving at a temperature 86 to 122°F (30 - 50°C) below highest tempering temperature.
